

Sandmeyer Offers Abrasive Waterjet Cutting

State-of-the-art technology.
Near net-shape parts.

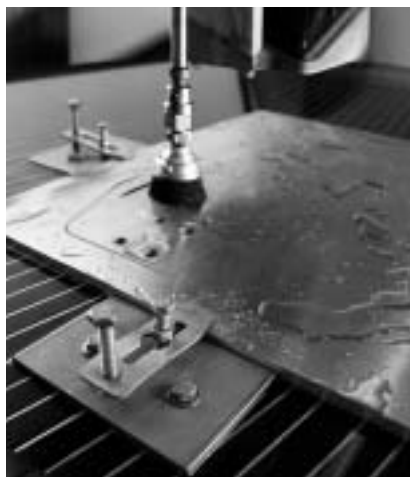

Sandmeyer Steel Company offers an additional dimension to its stainless steel and nickel alloy plate processing capabilities.

At Sandmeyer Steel Company we are committed to maintaining our leadership role as the premier cutting service organization in the stainless and nickel alloy plate business. In addition to our already diverse menu of plate processing capabilities, we offer a state-of-the-art abrasive waterjet cutting system manufactured by Flow International Corporation — the WMC Series. Flow is recognized as the world's leading manufacturer of this equipment.

Most economical abrasive waterjet cutting technology available

Multiple cutting heads, an integrated abrasive removal and recycling system, Windows™-based PC

machine control and programming, and Flow's 60,000-psi pump mean simply that Sandmeyer can offer you the most productive, efficient, cost-effective abrasive waterjet cutting available anywhere.

Near net-shape parts of virtually any size

Utilizing ball screw drive system technology, Sandmeyer's abrasive waterjet cutting can provide you with near net-shapes and intricate parts cut to the accuracy levels and close tolerances you require. Secondary finishing can

now be minimized if not totally eliminated. Our custom-designed water table allows us to cut sizes ranging from your smallest parts up to parts as wide as 13 feet, up to 6-1/2" thick, and weighing up to 20,000 pounds.

Get the edge you need from Sandmeyer

Unlike other cutting processes, Sandmeyer's abrasive waterjet cutting assures you of receiving a consistent superior edge quality with no heat-affected zone. So don't compromise. Get the edge you need from Sandmeyer Steel Company — the premier cutting service organization in the stainless steel and nickel alloy plate business.
