

Bandsaw Cutting

Integrated Bandsaw Cutting Center

Combining Higher Quality with Reliable Sandmeyer Service

Sandmeyer Steel Company has once again demonstrated our commitment to being the premier cutting service organization in the Stainless Steel and Nickel Alloy Plate business.

We have recently completed the installation of an integrated Bandsaw Cutting Center. The Center consists of three state-of-the-art KASTO saws and a 15-ton material handling system.

The Center was designed to process our largest full-size plates. As a result, we can provide a cut piece as large as 124" wide and 274" long. Additionally, the saws can cut narrow bars. This is especially useful for supplying bars cut from plate for non-standard bar sizes and types.

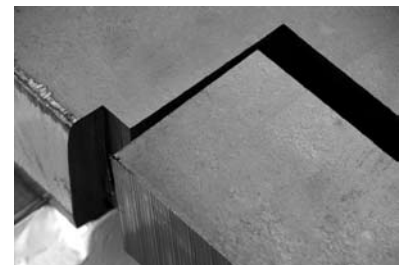

Do your manufacturing and machining processes demand that part size variation is eliminated?

If so, bandsaw cutting provides a better edge quality than plasma cutting, virtually eliminating taper and out-of-square edges. A programmable controller ensures accurate and repeatable cutting head and plate feed movements. This means on-size and in-tolerance parts each and every time. And, of course, a bandsaw cut edge does not have a heat-affected zone to machine through, saving you both time and tooling costs. Tolerances within 1/8" can be maintained on both the width and the length of every piece.

Get the edge you need from Sandmeyer

Sandmeyer Steel Company offers bandsaw cutting, abrasive water jet cutting, plasma cutting, and extensive machining capabilities under one roof. When matched with our 15 million pound inventory of Stainless Steel and Nickel Alloy Plate and our always outstanding service, Sandmeyer provides the complete package for a cutting service operation!

Thickness Range	3/16" to 6-1/2"
Maximum Cut Piece Size	124" x 274"
Maximum Piece Weight	15 tons
Tolerances	Within 1/8" width and length Edges perpendicular and parallel to within 1/16"
Features	Fully-automated cutting head and plate feed assures accuracy and repeatability of every cut
